

Musculoskeletal Tissue Regeneration: Biological Materials and Methods (Orthopedic Biology and Medicine)

The repair of musculoskeletal tissue is a vital concern of all surgical specialties, orthopedics and related disciplines. Written by recognized experts, this book aims to provide both basic and advanced knowledge of the newer methodologies being developed and introduced to the clinical arena. A valuable resource for researchers, developers, and clinicians, the book presents a foundation to propel the technology and integration of the current state of knowledge into the 21st century.
