

The Artificial Intelligence Revolution: Will Artificial Intelligence Serve Us Or Replace Us?

The Artificial Intelligence Revolution by Louis A. Del Monte is a warning regarding the threat new artificial intelligence (AI) technology poses to the survival of humankind. Will the future come down to man versus machine, when machines become more intelligent than humans? Will an artificial intelligence robot be your friend or foe? Scientists are working relentlessly at improving AI technology for the benefit of man. Evolved technology is everywhere--smart TVs, smart phones, and even smart houses. One day the artificial intelligence of these machines will match our own intelligence--and one day it will exceed it. We will have reached the singularity, a point in time like no other. Then what? Will machines continue to serve us as the balance tips in their favor? These questions are addressed rigorously, their potentialities extrapolated for one reason--the survival of humankind. Are strong AI machines (SAMs) a new form of life? Should SAMs have rights? Do SAMs pose a threat to humankind? Del Monte and other AI experts predict that AI capabilities will develop into SAMs with abilities far beyond what human beings can even fathom. Will they serve us, or will SAMs take an entirely different viewpoint? That question and many more are tackled by Del Monte in this sobering look in the The Artificial Intelligence Revolution.
