

# Human Hair and the Sikhs: Preserving the Homo Sapeien Heritage

Man is the climax of evolution. It took approximately two million years for man to be what he is today and it is only in the last two thousand years that man has started mutilating his hair. The neglect of this precious natural asset at the altar of vanity poses a grave threat of the survival of mankind. The symptoms are emerging inestimably and the fate of the human race in another two thousand years into the future will not be hard to imagine. This suicidal path has to be reversed. The Sikhs are the only known community of the human race caring for this perspective of the human civilisational evolution.
